Read the text then answer the questions:

**How to
Improve your memory**

The human brain is very powerful. The average adult human brain only weighs about 1.4 kilograms, but it can hold much more information than most computers. However, there is another difference between humans and computers. Computers don't forget information they are given, but humans often do. No one remembers everything and luckily we don't usually have to. But some people have a better memory than other people- or at least, some people can remember some things better than other people can. For example, Mozart once listened to a piece of music for the first time, and then he immediately sat down at the piano and played it perfectly from memory. But his memory wasn't good in other ways- his wife often had to remind him what day it was!
